Security Warning for Lab1

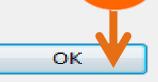

The Lab1 project file has been customized and could present a security risk by executing custom build steps when opened in Microsoft Visual Studio. If this project came from an untrustworthy source, it could cause damage to your computer or compromise your private information.

More Details

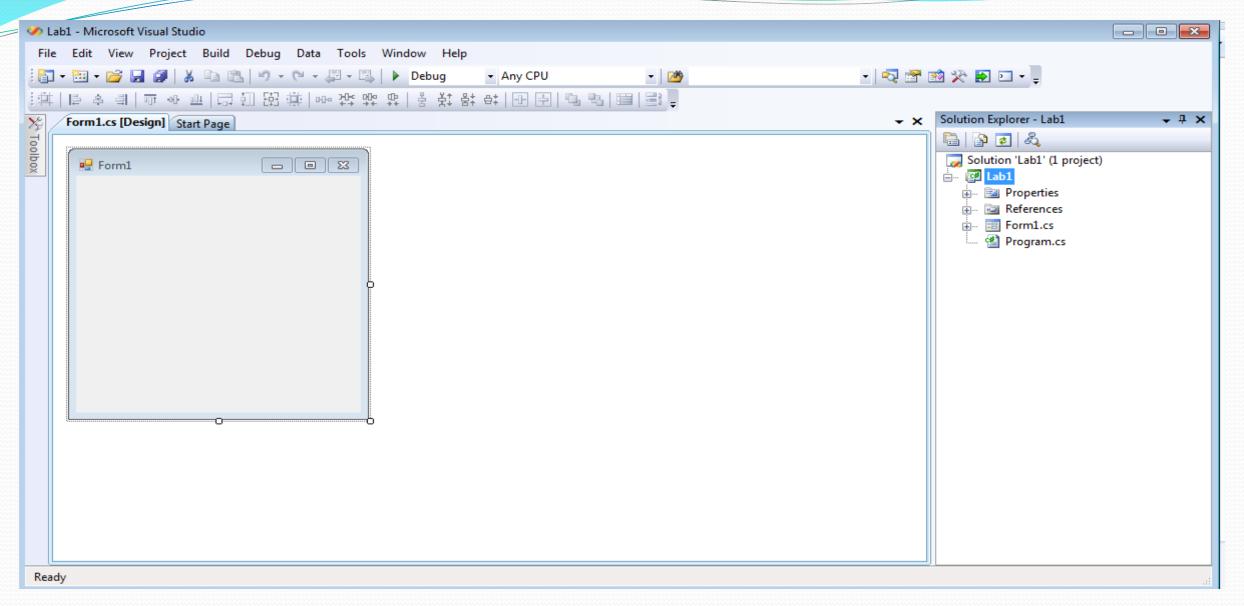

Project load options

- Load project for browsing
 - Opens the project in Microsoft Visual Studio with increased security. This option allows you to browse the contents of the project, but some functionality, such as IntelliSense, is restricted. When a project is loaded for browsing, actions such as building, cleaning, publishing, or opening designers could still remain unsafe.
- Load project normally
 - Opens the project normally in Microson. Conal Studio. Use this option if you trust the source and understand the potential risks involved. Microsoft visc. I Studio does not restrict any project functionality and will not prompt you again for this project.
- Ask me for every project in this solution
